

BUDGETING BASICS

- 1** Determine your monthly net income. This is what you make after taxes.
- 2** Determine your monthly expenses. There are two types: fixed (i.e. mortgage, car insurance) and flexible (i.e. groceries, gas). It's also important to know when these bills are due each month.
- 3** Pay yourself first! Adding savings to your budget will help prepare you for unexpected expenses in the future.
- 4** Invest in your future by contributing to a retirement plan or investing your money each month.
- 5** You're ready to go! Keep track of your monthly spending to help adjust your future budgets.
